

# ST. LAWRENCE HIGH SCHOOL

A JESUIT CHRISTIAN MINORITY INSTITUTION

Sub: Life Science

Class: VIII

Date: 30.1.2021

## Ch-1 -Transport in Plants

F.M:15

### WORKSHEET – 5

(1x15=15)

- i) Which of the following processes help in absorption of water from the soil?  
(1) Diffusion (2) Osmosis (3) Active transport (4) All of these
- ii) Food cannot move without  
(1) Xylem (2) Phloem (3) Xylem and phloem (4) None of these
- iii) Which of the following help in movement of the absorbed water in plants?  
(1) Transpiration (2) Root pressure (3) Transpiration and root pressure  
(4) Translocation
- iv) Water is given out through  
(1) Roots (2) Stem (3) Fruits (4) Stomata
- v) Transpiration is regulated by the \_\_\_\_\_ activity.  
(1) Physical (2) Physiological (3) Chemical (4) All of these
- vi) Too much of transpiration causes  
(1) Swelling (2) Chlorosis (3) Wilting (4) Translocation
- vii) The number of guard cells surrounding the stomatal pore is  
(1) 1 (2) 2 (3) 3 (4) 4
- viii) Which of the following is given out through stomata during photosynthesis?  
(1) Carbon Dioxide (2) Nitrogen (3) Oxygen (4) Hydrogen
- ix) The concentration of \_\_\_\_\_ increase during the day in guard cells.  
(1) Oxygen (2) Water vapour (3) Glucose (4) Carbon Dioxide
- x) The outer most layer of the sunflower stem is  
(1) Epidermis (2) Sclerenchyma (3) Endodermis (4) Collenchyma
- xi) Which of the following is present between xylem and phloem?  
(1) Epidermis (2) Endodermis (3) Periderm (4) Cambium
- xii) Closing of stomata will not lead to the decrease in  
(1) Respiration (2) Transpiration (3) Translocation (4) Photosynthesis
- xiii) Which of the following will carry out transpiration?  
(1) Stomata (2) Lenticels (3) Stomata and lenticels (4) Phloem
- xiv) Stomata generally closes at  
(1) Noon (2) Morning (3) Sunrise (4) Night
- xv) Which of the following acts as an anti- transpirant?  
(1) Oxygen (2) Water (3) Vaseline (4) Carbon Dioxide
