a) cirrostratus    b) altostratus    c) nimbostratus
  
- 3) The low lumpy clouds are -  
a) altocumulus    b) stratocumulus    c) cirrocumulus
  
- 4) The following clouds usually cause no precipitation other than a light drizzle -  
a) stratus    b) cumulus    c) cirrus
  
- 5) More abundant sunshine is experienced in the places in the -  
a) polar region    b) temperate region    c) tropical region
  
- 6) In comparison to winter season, India during summer season gets sunshine for -  
a) more hours    b) neither more nor less hours    c) less hours
  
- 7) The Campbell-Stokes Sunshine Recorder is equipped with a chemically sensitized card with –  
a) cylindrical lens    b) spherical lens    c) aspheric lens

- 8) The Earth's surface and cloud cover is studied from space by the -  
a) satellites      b) aeroplanes      c) rockets
- 9) TIROS was launched on –  
a) 1<sup>st</sup> April 1950      b) 1<sup>st</sup> April 1930      c) 1<sup>st</sup> April 1960
- 10) Weather satellites have led to great advancement in –  
a) Mythology      b) Meteorology      c) Metrology
- 11) TIROS was the first -  
a) weather satellite      b) navigation satellite      c) polar satellite
- 12) INSAT – 3DR was successfully launched by -  
a) NASA      b) ISRO      c) RFSA
- 13) The following is a meteorological satellite of India-  
a) KALPANA-1      b) ARYABHATTA      c) CHANDRAYAAN-1
- 14) On 8<sup>th</sup> September, 2016 the following satellite was launched -  
a) INSAT – 3      b) INSAT – 3D      c) INSAT – 3DR
- 15) TIROS stands for -  
a) Telegraph & Infrared Observation Satellite  
b) Television & Infrared Observation Satellite  
c) Telescope & Infrared Observation Satellite
