Solve the following :

1. There are 28 boats. If 8 people are sitting on a boat. How many people are there in all ?

$$\begin{array}{r} \text{Number of boats} \qquad \qquad \qquad 28 \\ \text{Number of people sitting on a boat} \quad \times 8 \\ \hline \therefore \text{Number of people in all} \qquad \qquad \qquad 224 \\ \hline \end{array}$$

Answer : There are 224 people in all .

2. There are 47 candles in a packet. How many candles are there in 6 packets ?

$$\begin{array}{r} \text{Number of candles in a packet} \qquad \qquad \qquad 47 \\ \text{Number of packets} \times 6 \\ \hline \therefore \text{Number of candles in all} \qquad \qquad \qquad 282 \\ \hline \end{array}$$

Answer : There are 282 candles in all.

3. There are 36 sacks. Each sack has 9 jugs. How many jugs are there in all ?

$$\begin{array}{r} \text{Number of sacks} \qquad \qquad \qquad 36 \\ \text{Number of jugs in a sack} \qquad \qquad \qquad \times 9 \\ \hline \therefore \text{Number of jugs in all} \qquad \qquad \qquad 324 \\ \hline \end{array}$$

Answer : There are 324 jugs in all .
