

St. Lawrence High School
A Jesuit Christian Minority Institution

Term : Pre – Test

Work Sheet – 21

Class – X

Subject – Physical Science

Date – 23.06.20

Chapter – Current Electricity

Topic – Electromagnetism

Choose the correct option for the following questions.

1 × 15 = 15

1. Generation of electricity was first proposed by scientist –
 - a. Oersted
 - b. Michael Faraday
 - c. Lenz
 - d. Coulomb

2. According to Faraday's law, a current will be generated –
 - a. When a magnetic flux link with a closed coil
 - b. When a magnetic flux link with a closed coil increases only
 - c. When a magnetic flux link with a closed coil decreases only
 - d. When a magnetic flux link with a closed coil changes with time

3. The induced emf in a coil is –
 - a. Directly proportional to the magnetic field
 - b. Directly proportional to the magnetic flux
 - c. Directly proportional to the rate of change of magnetic flux
 - d. All of the above

4. The direction of induced current will be such that –
 - a. It will try to oppose the cause of its generation
 - b. It will try to help the cause of its generation
 - c. It will be always in clockwise direction in any coil
 - d. It will be always in anti clockwise direction in any coil

5. An a.c. generator obeys –
 - a. Faraday's law
 - b. Lenz's law
 - c. Bothe the laws
 - d. None of these

6. In an a.c. generator, if the current induced in the coil for the first half cycle is anticlockwise, then –
 - a. current induced for the next half cycle is also anticlockwise
 - b. current induced for the next half cycle is clockwise
 - c. current induced for the next half cycle will be zero
 - d. None of these

7. Electric generator –
- Converts electrical energy to mechanical energy
 - Converts mechanical energy to electrical energy
 - Can only generate a.c current
 - None of these

8. If the south pole of a bar magnet approaches a solenoid as shown in the figure, then the current in the coil near point A will be -

- Clockwise
- Anti Clockwise
- There will be no current
- Cannot be predicted

9. If the south pole of a bar magnet approaches a solenoid as shown in the figure, then which pole will be generated at the farthest end (at point B)?

- N pole
- S pole
- No pole will be generated
- Cannot be predicted

10. Split ring is used in –

- D.C. motor
- a.c. generator
- D.C. generator
- None of these

11. The necessity of split ring is –

- It changes the magnetic flux
- It alternates the direction of current
- It auto cut the circuit such a way that the induced current becomes unidirectional
- None of these

12. In household connection, all the appliances are connected always in –

- Series with the main supply
- Parallel with the main supply
- Mixed combination
- None of these

13. If different appliances are connected in series with the main supply, then –

- Potential drop across different appliances will be different
- Independent operation of one specific appliance is not possible
- The effective impedance will be large compared to parallel combination
- All of the above

14. In household connection, the switches are always connected with the –

- Live wire
- Neutral wire
- Earth wire
- Can be connected to any wire of the above

15. The left pin of a three pin socket is always connected to –
- a. Live wire
 - b. Neutral wire
 - c. Earth wire
 - d. None of these

Name of the teacher – Soumitra Maity
